

Scan Report – Orthopedics

Patient Name: Kavya Surendar

Patient ID: PAT-260600001

Department: Orthopedics

Consulting Doctor: Dr. Rabjot

Title: X-Ray Right Knee (AP & Lateral View)

Type: Scan Report

Document Date: 24-06-2026

Clinical Indication: Patient complains of persistent right knee pain following a minor fall 2 weeks prior.

Findings:

- No evidence of acute fracture or dislocation
- Joint alignment appears normal
- Mild narrowing of medial joint space observed
- Soft tissue swelling noted around the knee joint
- No significant osteophyte formation

Impression: Mild soft tissue injury with early signs of joint space reduction. Suggest correlation with clinical findings.

Notes: Patient advised rest and physiotherapy. NSAIDs prescribed for pain management. Follow-up recommended if symptoms persist beyond 2 weeks.
